The switch drawings in this document are for illustration only and may not match your particular switch model.

For switch and accessories installation information, browse to the manuals for your switch model at www.hpe.com/networking/ResourceCenter.

Aruba 2930F warm product and other mounting information

- If you are mounting the Aruba 2930F 8G switch in a rack with other products, the preferred position for the switch is at the base of the rack (for optimal cooling), or below as many of the other products as can be accommodated, while still ensuring that the Installation Precautions (under the WARNING!, below) regarding weight distribution are observed.

- When mounted in a rack, ensure that a 1U (44.45 mm / 1.75-inch) vertical rack space exists between the Aruba 2930F 8G switch and the device above it.

- When mounting the Aruba 2930F 8G switch on a wall, under a table, or on a horizontal surface, ensure that the supplied four rubber mounting feet are placed on the bottom of the switch, as shown (under Tabletop or desktop mounting on page 9). This is required to provide the proper thermal spacing between the switch and the mounting surface.

- Avoid obstructing the ventilation holes on the top, sides, and back of the switch.

- Do not install the Aruba 2930F 8G switch in a confined space that does not allow a free air flow.

- When installing the switch in an enclosed space containing free air flow, ensure that any adjacent surfaces are at least 15.3 cm (6 inches) from the sides and back of the switch.

Installation precautions

- The rack or cabinet should be adequately secured to prevent it from becoming unstable and/or falling over.

- Devices installed in a rack or cabinet should be mounted as low as possible, with the heaviest devices at the bottom and progressively lighter devices installed above.
• Do not ship any switch in a rack without checking for restrictions in the Aruba 2930F Switches Installation and Getting Started Guide. Otherwise, you may void the switch warranty.

• Ensure the power source circuits are properly grounded, then use the power cord supplied with the switch to connect the AC adapter to the power source.

• Use only approved power cords with your Aruba Networking Product. Please see the power cord information (Power cords) of this guide for acceptable power cords that are appropriate for this product. Failure to use approved power cords can result in personal injury and product damage, and may void your product warranty.

• If your installation requires a different power cord than the one supplied with the switch and AC adapter, be sure the cord is adequately sized for the AC adapter’s current requirements. In addition, be sure to use a power cord displaying the mark of the safety agency that defines the regulations for power cords in your country. The mark is your assurance that the power cord can be used safely with the switch’s AC adapter and power supply.

• When installing the switch, the AC outlet should be near the switch and should be easily accessible in case the switch’s AC adapter must be powered off.

• Do not install the switch in an environment where the operating ambient temperature exceeds its specification. See the section titled Aruba 2930F Switch Safety and Regulatory Information on page 15.

• Ensure the switch’s AC adapter does not overload the power circuits, wiring, and over-current protection. To determine the possibility of overloading the supply circuits, add together the ampere ratings of all devices installed on the same circuit as the switch’s AC adapter and compare the total with the rating limit for the circuit. The maximum ampere ratings are usually printed on the devices, near the AC power connectors.

• For a wall-mounted Aruba 2930F 8G Switch (JL258A), face the network ports up, that is, away from the floor. Do not wall-mount the switch with the network ports facing down (towards the floor).

• Do not install the Aruba 2930F 8G PoE+ 2SFP+ switch in an environment where the operating ambient temperature might exceed its specification. When mounting the switch in a rack, ensure that a 1U (44.45mm/1.75-inch) vertical space is left for cooling between the switch and the device above it, and at least 15.3 cm (6 inches) of space around the sides and back of the switch. When mounted in a fully enclosed rack or cabinet, ensure that the air flow for cooling around the top, sides, and back of the switch is not restricted. Installing the Aruba 2930F 8G PoE+ 2SFP+ Switch in an enclosed, confined space such as a small bookshelf or unventilated cabinet is not recommended.

---

**Power supply operation**

The Aruba 2930F 8G PoE+ 2SFP Switch does not have a power switch. It is powered on when the external AC/DC power adapter is connected to the switch and the adapter power cord to a properly grounded power source. The external AC/DC power adapter automatically adjusts to any voltage between 100-240 volts and either 50 or 60 Hz. The external AC/DC power adapter supplies 54 volts DC to the switch. No voltage range settings are required.
Prepare for installation

1. Unpack and check included parts:
   - Switch
   - Accessory kits (installation hardware)

<table>
<thead>
<tr>
<th>Part number</th>
<th>Count</th>

</tr>
</tbody>
</table>

   - AC power adapter (5066–5559)
   - Power cord (See Power cords)
   - Documentation kit (5200–1998)

   Screws for mounting the switch on a wall or under a table are not included. If you plan to mount the switch on a wall or under a table, you will need to provide four 5/8–inch number 12 wood screws.

2. Prepare for installation.

   To avoid personal injury or product damage, review the Installation precautions before beginning the installation.

3. Power-on and verify that the self-test completes normally. An Aruba 2930F 8G switch does not contain a power on/off switch. It is turned on by connecting the power cord to the AC power adapter and to a properly-grounded AC power source, then connecting the AC adapter to the switch.
Port LEDs: Off after self-test unless a network cable is connected and the port is receiving link beat.

Global Status LED: Green after self-test in default configuration.

Locator/Unit-Identification LED: Off after self-test.

Speed Mode Selected LED: Off after self-test in default configuration.

PoE Mode Selected LED (Only on Aruba 2930F models that support PoE+ operation): Off after self-test in default configuration.

User Mode Selected: Off after self-test in default configuration.

4. Disconnect the AC adapter from the switch and remove the power cord from the power source.

Mounting the JL258A Aruba2930F 8–port switch

Supported mounting options for the Aruba 2930F 8G switch include:

- Rack mount
- Tabletop or desktop mount
- Under-table mount
- Wall mount
(Optional) Attaching the JL312A Power Adapter Shelf to the Aruba 2930F 8G switch

To install the optional Power Adapter Shelf, see the printed instructions provided with the shelf, then return to this guide and go to the next section, (Optional) Attaching the JL311A cable guard to the Aruba 2930F 8G switch on page 8.

(Optional) Attaching the JL311A cable guard to the Aruba 2930F 8G switch

- If you do not have the optional J311A cable guard to attach to the switch, go to the next section, Mounting the Aruba 2930F 8G switch without a cable guard on page 9.
- If you have the optional J311A cable guard to attach to the switch, go to the printed instructions shipped with the cable guard to complete the setup process. After installing the optional cable guard, return to this guide or go to the Aruba 2930F Switches Installation and Getting Started Guide for information on topics such as:
  - SFP/SFP+ installation notes
  - Links to the latest software version and manuals for your switch
  - Power cords
  - Safety and regulatory information

(You can access the Installation and Getting Started Guide at www.hpe.com/networking/ResourceCenter).
Mounting the Aruba 2930F 8G switch without a cable guard

Use the instructions in this section to mount the Aruba 2930F 8G switch if you do not plan to attach the optional JL311A cable guard to the switch.

Rack mounting

Procedure

1. Install mounting brackets (included) for use in a two-post rack. You can orient the brackets to be either flush with the switch front or offset from the switch front, as illustrated below.

   If the JL312A Power Adapter Shelf is installed, then position the mounting brackets over the center set of screw holes on each side of the switch instead of the forward set on each side.

2. Secure the mounting brackets to a two-post rack. The illustration to the right shows the recommended positioning of the mounting brackets when the optional JL312A Power Adapter Shelf is used with the switch.

Tabletop or desktop mounting

Procedure

Attach the four self-adhesive pads (included) to the bottom corners of the switch and place the switch on a secure tabletop or desktop surface.
Wall or under-table mount

You can mount the Aruba 2930F 8G PoE+ 2SFP+ Switch on a wall with the network ports facing up, or under a table.

- For safe operation, do not install the switch with the side ventilation holes facing down.
- For under table mounting, the top-of-switch ventilation holes must be facing down.

Procedure

1. To help provide proper ventilation, attach the four self-adhesive pads (included) to the bottom corners of the switch.

2. Install short mounting brackets (included).
3. Secure the switch on the wall or under-table location using four 5/8–inch number 12 wood screws (not included).

Connecting the switch to the network

1. (Optional) Connect an RJ-45 console cable (included) and/or a micro-USB console cable (not included) to a VT-100 terminal or a PC (running suitable terminal emulation software).
If both cables are connected, input is accepted only from the Micro USB connector. For more information, see the information on connecting a management console in the Aruba 2930F Switches Installation and Getting Started Guide.

2. (Optional) Insert transceivers.

To ensure proper operation of your switch, use only genuine Aruba SFP/SFP+ transceivers supported by your switch. For more information on using transceivers, see SFP/SFP+ installation notes.

3. Connect network cables.
In the factory default configuration, the switch automatically obtains its IP network settings from a DHCP or BootP server after connecting to the network. If you do not use direct console access to initially determine the switch IP address, you can determine the assigned IP address by inspecting your DHCP/BootP server or by querying LLDP information from another, directly connected neighbor switch. CLI LLDP commands for an ArubaOS neighbor switch are listed below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show lldp info remote port_#</code></td>
<td>For the specified port on the neighbor switch, lists the IP address and other data for the directly connected Aruba 2930F switch (where <code>port_#</code> is the port used on the neighbor switch to access the Aruba 2930F switch you are setting up).</td>
</tr>
<tr>
<td><code>show lldp info remote all</code></td>
<td>Lists IP address and other data on all active ports on the neighbor switch.</td>
</tr>
</tbody>
</table>
SFP/SFP+ installation notes

To ensure proper operation of your switch, use only the genuine Aruba SFP/SFP+ transceivers supported by your switch. When selecting a fiber SFP device, make sure it can function at a temperature that is not less than the recommended maximum operational temperature of the product. Use only approved Laser Class 1 SFP transceivers.

Use only genuine Aruba SFP/SFP+ transceivers

Non-Aruba SFP/SFP+ transceivers are not supported. Use of genuine Aruba products ensures that your network maintains optimal performance and reliability. Should you require additional transceivers, please contact an Aruba sales representative or an authorized reseller. For transceiver support information for your switch model, see the support matrixes in the in ArubaOS-Switch Transceiver Guide on the Hewlett Packard Enterprise Information Library at www.hpe.com/networking/ResourceCenter.

Hot Swapping SFP/SFP+ transceivers

Supported SFP/SFP+ transceivers that you can install in your Aruba switch can be “hot swapped” — removed and installed while the switch is receiving power. However, you should disconnect the network cables from the SFP/SFP+ transceivers before hot-swapping them.

When you replace an SFP/SFP+ transceiver with another of a different type, the switch may retain selected port-specific configuration settings that were configured for the replaced unit. Be sure to validate or reconfigure port settings as required.

SFP/SFP+ connections to devices with fixed speed/duplex configurations

When connecting a device to your switch port that contains an SFP/SFP+ transceiver, the speed and duplex settings of the switch port and the connected device must match. Otherwise, you may not get a link. For some older network devices, including some older Hewlett Packard Enterprise devices, the default speed/duplex settings may be predefined (for example, to 1000 Mbps/Full Duplex), or otherwise set differently from the default configuration of your switch port. Because of these default speed/duplex considerations, you should make sure that devices connected to your SFP/SFP+ ports are properly configured. At a minimum, make sure the configurations match.

Switch Operating System Software

For the latest software version supported by your switch, visit http://www.hpe.com/networking/support.

For software installation and management, the Basic Operation Guide and other software documentation for your switch at www.hpe.com/networking/ResourceCenter.

Power cords

Use one of the following power cords for an Aruba 2930F switch:

<table>
<thead>
<tr>
<th>Argentina</th>
